

Protecting Water. Protecting People.™

Smith & Loveless Inc.

SmithandLoveless.com

SECOND TO NONE. Without equal. Gold standard. Unparalleled. How many different ways do people describe our products? You get the idea. These aren't our words, though. You'll hear them from the generations of customers with Smith & Loveless installations in place. Yes, generations. Having been in business since 1946, we've covered a few of them.

Success may define our past, but our future has always been driven by innovation and progressive, forward thinking. That means knowing the best engineering and manufacturing will always result in longer life and lower lifetime costs. It's believing the people who need our products deserve nothing less. Protecting Water. Protecting People.™... that's what matters most.

PRODUCT PIONEERS AND PROVEN PERFORMERS.

At Smith & Loveless, we prove you can have both. It started with the first factory-built wastewater pump station introduced more than 70 years ago, a classic approach that withstands the tests of time – and gets better with each one. It extends to the full array of pumping, treatment, headworks and separation technologies we design and manufacture today. We don't just strive for industry firsts. We build industry bests.

WATER MAKES LIFE POSSIBLE. Too little or too much can make life difficult, even deadly. When it comes to handling water for municipal, industrial, commercial and private development needs, inferior products are not an option. From pumps and pumping systems, membrane bioreactors, and pre-engineered treatment systems, to grit removal, aeration, filtration and separation technologies, count on Smith & Loveless for continuous innovation and uncompromised quality. You'll find our installations in more than 70 countries, on all seven continents.

A BETTER WAY TO PUMP.™

The name Smith & Loveless will be forever linked to pumps and pumping systems. That's what happens when you revolutionize the industry and repeatedly set the standards. Our complete line of factory-built and -tested pumps and systems serves the water and wastewater handling needs of municipalities, developments and industries worldwide. Whether it's a standard or custom design, your Smith & Loveless system is tailored to exceed delivery and performance demands every time.

When we first mounted a complete lift station – pumps, piping, valves and controls – outside of and above the wet well, we made wastewater pumping dramatically simpler, safer and more economical. We didn't stop there. We've delivered the same qualities to above-grade, semi-recessed and underground configurations. At the heart of each is the **SMITH & LOVELESS STAR ONE™ NON-CLOG PUMP**, the gold standard for performance and durability.

WATER SMART, WATER TOUGH.

Look around the world. Water and wastewater infrastructure is critical to standards of living and quality of life. That places enormous responsibility on treatment plants. Which is why you'll find thousands of Smith & Loveless installations across the globe, helping maximize efficient use and reuse of water resources. Because lives and livelihoods depend on the equipment we make, only the smartest engineering and toughest manufacturing standards will do. It's a responsibility we take seriously, and a job no one does better.

SMITH & LOVELESS WASTEWATER TREATMENT SYSTEMS come pre-engineered in factory-built and field-erected configurations to boost reuse capabilities for capacities large and small. All are tailored to the design requirements for centralized and off-grid applications. Our innovative **water systems** extend to all sectors of water treatment and distribution, including water treatment plants, water booster stations and ion exchange systems.

SEPARATE, AND UNEQUALED.

Water serves more purposes than anyone can count. In the process, it often takes in countless unwanted elements. Smith & Loveless takes them out with market-leading grit removal, separation and filtration technologies. We've applied decades of separation experience and innovation to more than just water and wastewater – they extend to mineral processing too, delivering more effective, efficient purification. Our products serve a variety of needs, yet they all share one characteristic: They're built to outlast and outperform all others.

First came the original vortex PISTA® Grit Chamber. Forty-plus years of research, development and commitment have followed, resulting in numerous patented and exclusive components that push grit removal, handling and dewatering capabilities to new levels. We also serve the world's potable and commercial process water needs with unique Smith & Loveless **FILTRATION AND MEMBRANE SYSTEMS**, solutions that are cutting-edge and cost-effective to the core.

LIFETIME VALUE. What are exceptional engineering and manufacturing worth? It goes beyond the bottom line, especially when decades of experience and innovation are behind them. Smith & Loveless customers benefit from made-in-the-USA equipment carefully crafted in a quality-controlled environment. They get single-source responsibility and support throughout the life of the product.

In our minds, there's no other way to think than long term. Conserving and reusing precious resources is our business. It's led to a proud legacy of delivering technologies that provide greater efficiency, longer product life and lower lifetime operating costs. We're less concerned about what is spent up front, and more about what can be saved over a lifetime. S&L engineering...it's about value.
